

## Assignment

Assume that you are a teacher who is asked to teach Mathematics in a lower Secondary Education class (12-15 year-old students, refugee/immigrant students included).

A. To begin with, choose a mathematical notion that is part of the curriculum of secondary classes and make a brief analysis of the cognitive content.

- Determine the characteristics of the student group: how many years they have been attending the host country's educational system and what their previous school experience.

B. Create an educational scenario that will be implemented through an activity.

- Apply it to the classroom.
- Finally present an assessment of your didactic intervention. This may include comments, recordings, photos, written papers, and anything else that could substantiate the assessment.
